Mr. Lowell Mims
President of BioPerformance, Inc.
Mr. Gus Romero
Vice President of BioPerformance, Inc.

Dear Mr. Mims and Mr. Romero,

Because of the recent slanderous remarks by the news media concerning our product, we would like to clear the air once and for all. We protect our product from any false accusations. We will now correct the false accusations concerning our product being made from moth balls, being toxic, hurting vehicles and not giving people any savings.

As you well know, naphthenates, naphthalenes, and other compounds from the same family are derived from hydrocarbons – aromatic substances like camphor, gasoline, petroleum, soft coal, or from the camphor tree. Naphthalenes were obtained from the tree, and then, in more recent times, from soft coal. They are combined with metals, organic components, etc., to obtain a naphthenate. We use organic naphthenates. When a naphthalene is converted into a naphthenate, we change the frequency and together with a dispersant we get a very large surface for the catalyzer to work. Catalyzers work by surface and not by mass. This is why our product is made of naphthenates, not naphthalenes. Naphthalenes are much larger crystals and are not useful for our purpose. Therefore, our product is not mothballs.

Maybe if you use naphthalene, it may work a while, but you need to have a larger surface for it to work as a catalyst. The frequency of the matter allows us to work much better in catalyzing. This transformation makes the crystals we use, when they contact the gasoline, because of the dispersants, disappear and only the molecules stay.

Also, as you can see in our Security Officer's Material Safety Data Sheet, our product is not toxic. I know if you put a piece of carbon and a diamond under the chromatographer, they both are the same product: carbon. However, we all know, they are not the same. During the 50 years of testing to get our product working by many people, we have never had any trouble with vehicles, as the product completely dissolves in the combustible, and thus becomes part of it. However, if the gas or diesel tanks have too many impurities, the gas lines and filters may clog. The product takes about 8 hours to act at 100% dissolving skims, incrustation of HC existing in tanks, tubes, pumps and injection systems, cleaning them as time goes by, depending upon the thickness of such incrustations. It does not harm the combustion system in any way according to our ISO 9000 Lab Tests.

By now, from the many testimonies you have (these are the real field tests) and we also have many testimonies, you know that you can get a hefty savings at the pump. This will depend on driving conditions, car maintenance, etc... and in the long run you will find your motor runs cooler, makes less noise, and will generally perform better. The product comes in different colors because we are dealing with enzymes. The reaction of the enzymes may vary and therefore the color. It works just the same no

matter what color it is! Because of the increase of the feeling of extra power using our product, it can cause some people to accelerate more, which causes a negative effect on fuel economy. Simply stated from our certified ISO 9000 tests, you can save up to 25% or more on fuel with optimal driving conditions.

Finally, I want to let you know that although we have had some supply problems for the last 6 weeks because of moving our manufacturing plant and enlarging our capacity, this has been resolved as you began receiving tons of product last week and 15 tons each week hereafter. We can now provide you with all the product you need, which is now up to 300 tons per month as the need arises. We can provide more than 300 tons per month as we increase the size of the manufacturing plant again in the future as the demand for the product increases. We have invested heavily in the plant, tripled our capacity, and the raw materials (in which we have also invested several millions of dollars).

Everyone is intrigued with our product and they sincerely want it now, because no one enjoys paying the high prices at the fuel pumps, but you can rest assured, under no condition will we ever release the ingredients to the general public because it has been our secret recipe for 50 years. We feel everything is finally in place to keep up with your demand, and we know the product will allow a hefty savings to a lot of people. You can see first-hand from your sales in America that you have the product everyone is wanting because it truly works.

Sincerely,
A. R.
